Job Description – Backend Developer (Node.js)

Job Title: Backend Developer (Node.js)

Location: Cairo, Egypt (Remote/On-site)

Experience: 2–4 years

Responsibilities:

• Design, develop, and maintain scalable server-side applications using Node.js and Express.

• Create and maintain RESTful APIs serving thousands of users daily.

• Implement authentication & authorization (JWT, OAuth2) for secure access.

• Design efficient database schemas (MongoDB, PostgreSQL, MySQL) and optimize queries.

• Collaborate with frontend developers to ensure seamless integration with APIs.

• Write unit and integration tests to ensure code reliability.

Required Skills:

• Strong proficiency in Node.js and Express.js.

• Experience with MongoDB, PostgreSQL, or MySQL.

• Knowledge of authentication, security, and API design best practices.

• Familiarity with Docker, Git, Postman, and CI/CD pipelines.

• Understanding of asynchronous programming and error handling.

Preferred Qualifications:

• Bachelor's degree in Computer Engineering, Computer Science, or related field.

• Experience with microservices architecture and cloud deployment.

• Strong problem-solving skills and attention to detail.
